

New – expanded range of skills profiles

A selection of more than 70 illustrative SFIA skills profiles

A quick-start guide to creating skills-based responsibilities for your roles.

March 2026

SFIA 9 - illustrative skills profiles

Generic mappings of SFIA 9 skills to recognised role families or career families. By looking across the industry, across different countries and users we can provide a useful starting point for creating a SFIA-based skills profile for common roles.

The SFIA framework is flexible by design...

- it does not prescribe or define jobs, roles, organisation structures or career paths
- instead - SFIA describes the skills that roles, jobs or career steps require
- this enables organisations of different shapes and sizes to create their own – built on a robust and proven framework

However – and based on significant demand from SFIA's users - we have collated **a set of generic mappings of SFIA skills** for the industry's most common role families...

- these provide a quick-start list of the most relevant SFIA skills for a selection of common roles.
- your own skill mappings will be specific to your context. You should tailor the mappings on this page to reflect your needs.
- the mapping does not include recommendations for SFIA levels.
- you will need to determine the level of responsibility of your own roles to assign SFIA skills and skill levels.

If you want to use these for your own organisation – here are some guidelines to help you.

- **Do not use these without tailoring for your own use**
- Take some time to learn about the [SFIA framework](#) and clarify what you are trying to achieve and the outcomes you want from skills profiles
- Read the guidance available on the website - see [Building SFIA-based skills profiles](#).
- Your organisation's priorities and context will drive the skills and competency levels required
- You will need to look at [the SFIA levels](#) to determine the relevant competency levels for your own jobs/roles
- If you can't find what you are looking for try the [SFIA views](#), [the full framework](#) view or the [A-to-Z search](#)
- Do not include too many SFIA skills per role - 5 to 7 skills is a pragmatic number to provide focus. Many roles need fewer.
- These generic roles do not imply an organisation or team design. SFIA is a great framework to support organisation design - but be aware that organisation design is a specialised activity.
- For example - larger organisations may have specialised jobs/roles - where smaller organisations may combine several roles into one job.

SFIA Partners and SFIA Consultants are available for advice and implementation support. Full details are available [here](#).

We also recommend [SFIA Accredited Training](#) which can teach you how to map SFIA skills to your own roles.

The [SFIA User Forum page is here](#) and includes guidance on job architectures and skills-based job analysis.

What's in the tables

1. **Name and a brief description** of the grouping, e.g. the Information and cyber security role family
 - this may be sub-divided e.g. Security operations, Information security audit and compliance, Information security strategy and management
2. **Example job titles** - this is illustrative only.
 - Job titles vary considerably between industries, employers, countries
 - Prefixes for career steps/job grades also vary (e.g. lead, senior, junior, principal, vice president, head of, director of)
 - For these reasons - the SFIA framework does not specify job titles but does describe levels of responsibility
3. **Look at these SFIA skills first group:** these are skills that are frequently in roles of this type across many organisations.

They are a sensible place to start, but they are: not mandatory, not a minimum requirement and not exhaustive.

4. **Other SFIA skills to consider** - These SFIA skills may be relevant in selected instances of the role, depending on organisational context, role scope, seniority or specialisation.

They are not optional extras and are not secondary in value. In some roles, these skills may be central.

5. The skill names are **live hyperlinks to the full skill description**.
6. The SFIA skill code and the range of levels available for each skill is also displayed.

AGILE DELIVERY ROLE FAMILY			Back to Table of contents		
ROLE Agile change agents			Roles responsible for developing, implementing, supporting, guiding, nurturing and improving agile working practices.		
Example Job Titles	Look at these SFIA skills and levels first:			Other SFIA skills and levels to consider:	
Scrum Master, Agile Coach	Business situation analysis	2-6	BUSA	Methods and tools	2-6 METL
	Organisation design and implementation	3-7	ORDI	Knowledge management	2-7 KNOW
	Organisational facilitation	4-6	OFCL	Organisational change management	2-6 CIPM
	Stakeholder relationship management	4-7	RLMT	Organisational change enablement	4-6 OCEN
	Innovation management	5-7	INOV		
	Organisational capability development	5-7	OCDV		
	Employee experience	4-6	EEXP		
	Measurement	2-6	MEAS		
	Learning delivery	2-5	ETDL		
	Consultancy	4-7	CNSL		
Business skills / Behaviours: In addition to professional skills the SFIA framework also defines a set of workplace skills/behavioural factors which complement technical skills. This holistic approach recognises that success in digital- and technology-related roles requires more than just technical proficiency. Examples from SFIA include collaboration, communication, creativity, decision-making, a digital mindset, leadership, learning and development, planning, problem-solving, adaptability, an improvement mindset, and security, privacy, and ethics. These can be combined with the professional skills to match the nature of the role and the organisational context.					
Notes: - The skill names in the table above are live hyperlinks to the full SFIA skill description. The numbers indicate the range of levels of responsibility available for each skill. - These skills provide a quick-start list of the most relevant SFIA skills for this role. The generic roles do not imply or recommend an organisation or team design. - Take some time to learn about SFIA and clarify what you are trying to achieve and the outcomes you want from skills profiles. Do not use these without tailoring for your own use. - Your organisation's priorities and context will drive the skills and competency levels required. - For example - larger organisations may have specialised jobs/roles - where smaller organisations may combine several roles into one job. - You should review and understand the SFIA levels to determine the relevant competency levels for your own jobs/roles. - You can use the levels to create graduated career steps of increasing responsibility and impact. You should use your own role/job titles and where needed your prefixes for seniority. - If you can't find what you are looking for try the SFIA views , the full framework view or the SFIA 9 skills directory - Do not include too many SFIA skills per role - 5 to 7 skills is a pragmatic number to provide focus. Many roles need fewer. https://sfia-online.org/en/sfia-9/sfia-views/sfia-9-multi-view/sfia-9-en-summary-chart-with-roles					

AGILE DELIVERY ROLE FAMILY

Back to Table of contents

ROLE

Agile product management

Roles responsible for defining, prioritising and delivering product outcomes using adaptive planning and iterative development. Includes managing product backlogs, translating user needs into requirements, and working with development teams to deliver value incrementally. Involves balancing stakeholder priorities, tracking product performance and refining direction based on data and feedback.

Example Job Titles	Look at these SFIA skills and levels first:			Other SFIA skills and levels to consider:		
Product Manager, Product Owner, Release Train Engineer	Product management	2-6	PROD	User research	2-6	URCH
	Delivery management	3-6	DEMG	Deployment	2-6	DEPL
	Stakeholder relationship management	4-7	RLMT	Risk management	2-7	BURM
	Requirements definition and management	2-6	REQM	Demand management	4-6	DEMM
	Business situation analysis	2-6	BUSA	Information systems coordination	6-7	ISCO
	Feasibility assessment	2-6	FEAS	Solution architecture	4-6	ARCH
	Customer experience	2-6	CEXP	Release management	2-6	RELM
	Measurement	2-6	MEAS	Market research	3-6	MRCH
	Business process improvement	2-7	BPRE	Selling	3-6	SALE
	Innovation management	5-7	INOV			

Business skills / Behaviours:

In addition to professional skills the SFIA framework also defines [a set of workplace skills/behavioural factors](#) which complement technical skills. This holistic approach recognises that success in digital- and technology-related roles requires more than just technical proficiency.

Examples from SFIA include [collaboration, communication, creativity, decision-making, a digital mindset, leadership, learning and development, planning, problem-solving, adaptability, an improvement mindset, and security, privacy, and ethics..](#) These can be combined with the professional skills to match the nature of the role and the organisational context.

Notes:

- The skill names in the table above are live hyperlinks to the full SFIA skill description. The numbers indicate the range of levels of responsibility available for each skill.
- These skills provide a quick-start list of the most relevant SFIA skills for this role. The generic roles do not imply or recommend an organisation or team design.
- Take some time to learn about SFIA and clarify what you are trying to achieve and the outcomes you want from skills profiles. Do not use these without tailoring for your own use.
- Your organisation's priorities and context will drive the skills and competency levels required.
- For example - larger organisations may have specialised jobs/roles - where smaller organisations may combine several roles into one job.
- You should review and understand the SFIA levels to determine the relevant competency levels for your own jobs/roles.
- You can use the levels to create graduated career steps of increasing responsibility and impact. You should use your own role/job titles and where needed your prefixes for seniority.
- If you can't find what you are looking for try the [SFIA views](#), [the full framework view](#) or the [SFIA 9 skills directory](#)
- Do not include too many SFIA skills per role - 5 to 7 skills is a pragmatic number to provide focus. Many roles need fewer.

ROLE

Network architecture practitioners

Roles responsible for designing, specifying, and governing network infrastructure architectures including LAN, WAN, cloud networking, and security topology, ensuring resilience, performance, and alignment with technology strategy.

Example Job Titles	Look at these SFIA skills and levels first:			Other SFIA skills and levels to consider:		
Network Architect, Senior Network Architect, Lead Network Architect, Cloud Network Architect, Infrastructure Architect (Networks), WAN Architect, Network Design Engineer, Telecommunications Architect	Network design	2-6	NTDS	Network support	1-5	NTAS
	Infrastructure design	2-6	IFDN	Non-functional testing	1-6	NFTS
	Systems design	2-6	DESN	Functional testing	1-6	TEST
	Emerging technology monitoring	4-6	EMRG	Systems integration and build	2-6	SINT
	Specialist advice	4-6	TECH	Problem management	2-5	PBMG
				Information security	2-7	SCTY
				Stakeholder relationship management	4-7	RLMT

Business skills / Behaviours:

In addition to professional skills the SFIA framework also defines [a set of workplace skills/behavioural factors](#) which complement technical skills. This holistic approach recognises that success in digital- and technology-related roles requires more than just technical proficiency.

Examples from SFIA include [collaboration, communication, creativity, decision-making, a digital mindset, leadership, learning and development, planning, problem-solving, adaptability, an improvement mindset, and security, privacy, and ethics..](#) These can be combined with the professional skills to match the nature of the role and the organisational context.

Notes:

- The skill names in the table above are live hyperlinks to the full SFIA skill description. The numbers indicate the range of levels of responsibility available for each skill.

- These skills provide a quick-start list of the most relevant SFIA skills for this role. The generic roles do not imply or recommend an organisation or team design.

- Take some time to learn about SFIA and clarify what you are trying to achieve and the outcomes you want from skills profiles. Do not use these without tailoring for your own use.

- Your organisation's priorities and context will drive the skills and competency levels required.

- For example - larger organisations may have specialised jobs/roles - where smaller organisations may combine several roles into one job.

- You should review and understand the SFIA levels to determine the relevant competency levels for your own jobs/roles.

- You can use the levels to create graduated career steps of increasing responsibility and impact. You should use your own role/job titles and where needed your prefixes for seniority.

- If you can't find what you are looking for try the [SFIA views](#), [the full framework view](#) or the [SFIA 9 skills directory](#)

- Do not include too many SFIA skills per role - 5 to 7 skills is a pragmatic number to provide focus. Many roles need fewer.

DIGITAL PRODUCT DEVELOPMENT, SALES AND MARKETING ROLE FAMILY

Back to Table of contents

ROLE

Sales and sales support practitioners

Roles focused on managing client relationships, meeting sales targets, and supporting sales through lead generation, market research, and customer outreach. Includes providing product or service information, analysing sales performance data, and optimising sales approaches.

Example Job Titles	Look at these SFIA skills and levels first:			Other SFIA skills and levels to consider:		
Sales representative, Sales support coordinator, Business development executive, Client relationship manager	Selling	3-6	SALE	Customer service support	1-6	CSMG
	Sales support	1-6	SSUP	Data analytics	2-7	DAAN
	Stakeholder relationship management	4-7	RLMT	Business intelligence	2-5	BINT

Business skills / Behaviours:

In addition to professional skills the SFIA framework also defines [a set of workplace skills/behavioural factors](#) which complement technical skills. This holistic approach recognises that success in digital- and technology-related roles requires more than just technical proficiency.

Examples from SFIA include [collaboration, communication, creativity, decision-making, a digital mindset, leadership, learning and development, planning, problem-solving, adaptability, an improvement mindset, and security, privacy, and ethics..](#) These can be combined with the professional skills to match the nature of the role and the organisational context.

Notes:

- The skill names in the table above are live hyperlinks to the full SFIA skill description. The numbers indicate the range of levels of responsibility available for each skill.

- These skills provide a quick-start list of the most relevant SFIA skills for this role. The generic roles do not imply or recommend an organisation or team design.

- Take some time to learn about SFIA and clarify what you are trying to achieve and the outcomes you want from skills profiles. Do not use these without tailoring for your own use.

- Your organisation's priorities and context will drive the skills and competency levels required.

- For example - larger organisations may have specialised jobs/roles - where smaller organisations may combine several roles into one job.

- You should review and understand the SFIA levels to determine the relevant competency levels for your own jobs/roles.

- You can use the levels to create graduated career steps of increasing responsibility and impact. You should use your own role/job titles and where needed your prefixes for seniority.

- If you can't find what you are looking for try the [SFIA views](#), [the full framework view](#) or the [SFIA 9 skills directory](#)

- Do not include too many SFIA skills per role - 5 to 7 skills is a pragmatic number to provide focus. Many roles need fewer.

INFORMATION AND CYBER SECURITY ROLE FAMILY

Back to Table of contents

ROLE

Incident management practitioners

Roles responsible for analysing, designing, managing and delivering the services required to minimise the negative impact of security incidents and restoring normal service operation as quickly as possible.

Example Job Titles	Look at these SFIA skills and levels first:			Other SFIA skills and levels to consider:		
Incident Analyst, Incident Manager, Major Incident Manager, Lead Incident Manager, Cyber Incident Manager	Incident management	1-6	USUP	Continuity management	2-6	COPL
	Security operations	1-6	SCAD	Information security	2-7	SCTY
	Digital forensics	2-6	DGFS	Functional testing	1-6	TEST
				Supplier management	2-7	SUPP
				Stakeholder relationship management	4-7	RLMT
			Methods and tools	2-6	METL	
			Business intelligence	2-5	BINT	

Business skills / Behaviours:

In addition to professional skills the SFIA framework also defines [a set of workplace skills/behavioural factors](#) which complement technical skills. This holistic approach recognises that success in digital- and technology-related roles requires more than just technical proficiency.

Examples from SFIA include [collaboration, communication, creativity, decision-making, a digital mindset, leadership, learning and development, planning, problem-solving, adaptability, an improvement mindset, and security, privacy, and ethics..](#) These can be combined with the professional skills to match the nature of the role and the organisational context.

Notes:

- The skill names in the table above are live hyperlinks to the full SFIA skill description. The numbers indicate the range of levels of responsibility available for each skill.

- These skills provide a quick-start list of the most relevant SFIA skills for this role. The generic roles do not imply or recommend an organisation or team design.

- Take some time to learn about SFIA and clarify what you are trying to achieve and the outcomes you want from skills profiles. Do not use these without tailoring for your own use.

- Your organisation's priorities and context will drive the skills and competency levels required.

- For example - larger organisations may have specialised jobs/roles - where smaller organisations may combine several roles into one job.

- You should review and understand the SFIA levels to determine the relevant competency levels for your own jobs/roles.

- You can use the levels to create graduated career steps of increasing responsibility and impact. You should use your own role/job titles and where needed your prefixes for seniority.

- If you can't find what you are looking for try the [SFIA views, the full framework view](#) or the [SFIA 9 skills directory](#)

- Do not include too many SFIA skills per role - 5 to 7 skills is a pragmatic number to provide focus. Many roles need fewer.

				Measurement	2-6	MEAS

Business skills / Behaviours:

In addition to professional skills the SFIA framework also defines [a set of workplace skills/behavioural factors](#) which complement technical skills. This holistic approach recognises that success in digital- and technology-related roles requires more than just technical proficiency.

Examples from SFIA include [collaboration, communication, creativity, decision-making, a digital mindset, leadership, learning and development, planning, problem-solving, adaptability, an improvement mindset, and security, privacy, and ethics..](#) These can be combined with the professional skills to match the nature of the role and the organisational context.

Notes:

- The skill names in the table above are live hyperlinks to the full SFIA skill description. The numbers indicate the range of levels of responsibility available for each skill.

- These skills provide a quick-start list of the most relevant SFIA skills for this role. The generic roles do not imply or recommend an organisation or team design.

- Take some time to learn about SFIA and clarify what you are trying to achieve and the outcomes you want from skills profiles. Do not use these without tailoring for your own use.

- Your organisation's priorities and context will drive the skills and competency levels required.

- For example - larger organisations may have specialised jobs/roles - where smaller organisations may combine several roles into one job.

- You should review and understand the SFIA levels to determine the relevant competency levels for your own jobs/roles.

- You can use the levels to create graduated career steps of increasing responsibility and impact. You should use your own role/job titles and where needed your prefixes for seniority.

- If you can't find what you are looking for try the [SFIA views](#), [the full framework view](#) or the [SFIA 9 skills directory](#)

- Do not include too many SFIA skills per role - 5 to 7 skills is a pragmatic number to provide focus. Many roles need fewer.
